Vehicle Sale Management System

Prepared for VA Motors

Version 1.1 • March 2026

Why This System?

Today, your dealership relies on paper documents and manual tracking for purchases, sales, repairs, and finances. This creates real challenges:

Lost Paperwork

Physical records get misplaced, damaged, or are hard to find when needed

No Profit Visibility

Difficult to know the true cost and profit on each vehicle you sell

Manual Tracking

Repairs, advances, and customer details tracked across scattered files

Slow Reporting

Compiling business reports is time-consuming and error-prone

What We're Building

A single, web-based system that manages the entire vehicle lifecycle — from purchase to sale — giving you full control, complete records, and real-time visibility into your business.

- Go paperless — every record stored digitally and searchable
- Track every vehicle from the moment you buy it to the moment you sell it
- See the true cost and profit on every vehicle automatically
- Control who can do what with flexible user roles and approvals
- Access it from any device — computer, tablet, or phone

How You'll Record Purchases

Three purchase channels — all in one system

1

Cash Purchase

Buy a secondhand vehicle for cash. Record the vehicle details, supplier, purchase amount, and date.

2

Lease Settlement

Settle a lease with the bank or finance company. Record the settlement amount paid to the institution and the cash paid to the seller.

3

Brand-New from Supplier

Purchase a brand-new vehicle from a company supplier. Registration number can be added later — it won't hold anything up.

Every vehicle record captures: make, model, year, colour, engine & chassis numbers, mileage, fuel type, and more.

How You'll Record Sales

Four sale types — each with its own workflow

Cash — Immediate

Customer pays the full amount (cash or bank transfer) and takes the vehicle.

Cash with Advance

Customer reserves with an advance payment. Validity period is calculated automatically based on the amount paid.

Lease / Finance

Customer finances through a third party. Down payment is recorded. Sale is finalised when the Delivery Order arrives.

Trade-In

Customer offers an existing vehicle as part-payment. The system shows the balance due after deducting the trade-in value.

Repairs & Write-Offs

Repair Management

- Send vehicles to repair vendors with a clear repair request
- Vehicle status automatically changes to 'In Repair'
- Record the final invoice amount when the vehicle returns
- Full repair history kept for every vehicle
- Repair costs automatically added to the vehicle's total cost

Write-Off & Disposal

- Submit a write-off request with a mandatory reason
- Manager must approve before the vehicle is written off
- Disposal proceeds are recorded (even if zero)
- Full transparency on every vehicle that leaves your lot

Vehicle Lifecycle

Every vehicle moves through clear stages — the system tracks it all automatically

Purchased → **In Stock** → **In Repair** → **Advance Placed** → **Finance Pending** → **Sold**

The system enforces valid transitions between stages. A vehicle can only move to a status that reflects an actual recorded transaction — no manual shortcuts allowed.

Availability Control

Each in-stock vehicle also has an availability flag. You can mark a vehicle as 'Not Available for Sale' with a reason (e.g. not yet in showroom). Vehicles in repair, under advance, or in the finance process are automatically marked as unavailable.

Keeping You in Control

Manager Approvals

- Discounts below listed price
- Vehicle write-offs
- Advance refunds
- Edits to completed sales

Full Audit Trail

- Every change recorded with who, when, and what
- Before & after values for every edit
- Cannot be altered by anyone — even admins

Notifications

- Advance approaching expiry
- Advance expired
- Vehicle returned from repair
- Approval requests & outcomes

Reports at Your Fingertips

Seven ready-made reports — all filterable by date range, exportable as CSV or PDF

Current Vehicle Inventory	Snapshot of all vehicles, their status, cost, and listed price
Vehicles Sold per Period	All sales in a date range with profit/loss per vehicle
Profit per Vehicle	Full cost breakdown and gross profit for any vehicle
Outstanding Advances	Active and expired reservations with days remaining
Vehicles in Repair	Which vehicles are at which vendor, and how long
Cash Flow Summary	Money in vs money out for any period
Write-Off & Disposal	All written-off vehicles with reasons and proceeds

Works on Every Device

100%

Web-Based

No software to install. Open a browser and you're in.

PWA

Ready

Install on your phone or tablet for an app-like experience.

24/7

Access

Work from anywhere — office, showroom, or on the road.

All data encrypted • Role-based access control • Secure login required

What's Not Included (For Now)

These items can be added in future phases if needed:

- Native mobile apps (iOS / Android)
- SMS, email, or push notifications
- Bank or finance company integrations
- Tax or regulatory compliance
- Multi-currency or multi-branch support
- Customer-facing website or online listings
- Vehicle valuation or market price tools

> *Any of these features can be scoped and estimated separately as a future enhancement.*

Next Steps

1. Review this document and confirm the requirements are complete
2. Sign off on the Business Requirements Specification
3. We begin system design and development

We look forward to building this system for VA Motors.
